## INTEGRATED SECURITY SOLUTIONS FOR CRITICAL INFRASTRUCTURE

Saab has built on a global reputation for high quality systems to provide complete integrated security solutions for corrections, airports, power stations, ports and other critical infrastructure.

Saab's security management system offers integration of a wide range of third party and customer preferred subsystems including CCTV, access control, intercoms, perimeter detection, duress and intruder detection. Each solution is tailored to meet specific customer needs and provides effective insurance against evolving requirements and future technology changes.

### *Features of the Saab solution include:*

- An open architecture based on industry standard protocols and commercially available operating systems.
- Capable of integrating third party and customer preferred sub-systems.
- A customisable user interface to provide seamless operation of all integrated subsystems, minimising the training burden on staff.
- Intuitive operator screens to simplify operations in stressful situations.
- Tailorable work-flows to meet customer specific business processes.
- Integrated user logs and database information to simplify auditing and forensic investigations.

- A high performance system to meet real time needs and availability.
- An embedded training capability that maintains alignment between the training and operational systems.
- Developed and supported in Australia.

The Saab security management system can be integrated with the Saab emergency management and response system to improve command and control, information exchange and enhance security team safety.
